

# Static Analysis Developer

Bochum, Ruhr-University Campus, Full-time

SonarSource is looking for a passionate Static Analysis Developer to create the most advanced static code analyzers in the world. You will be part of the autonomous Languages team and have a word to say on what you will be working on. By defining and implementing new analysis features, you will have an impact on the code quality and security of millions of developers around the world.

## On a daily basis, you will

- Have fun in a great team that is always willing to exchange knowledge
- Develop new and maintain existing features for static code analyzers for different programming languages (Java, Kotlin, JavaScript, TypeScript, Python, Swift, TSQL, PHP and many others)
- Evolve the way our analyzers understand code by creating ever better models and develop new rules on top of them
- Contribute to the open source community by developing open source products under the SonarSource umbrella and contributing back to libraries used by our products
- Help collectively define the team's short and long term goals
- Contribute to the code quality and security of millions of developers around the world

## The skills you will demonstrate

- Ability to develop in Java with clean code
- Excellent engineering skills and good Computer Science fundamentals
- Fluency in source code quality: tests (unit and functional), CI/CD
- Experience with agile practices and principles
- Comfortable in dealing with change and complexity
- Leadership; you take initiative and demonstrate your ability to lead a subject from beginning to end
- Confidence to challenge the status quo as well as to be challenged
- We welcome candidates with the desire to grow, train and assist others in their delivery
- Compiler frontend knowledge is not required; you will learn it while working at SonarSource

Join us in this fun adventure and take a unique opportunity to help build the best code analysis products in the world!
